## Position Opening

A **water/wastewater chemist** performs wet chemistry methods for ammonia, phosphorous, cyanide, oil/grease, hydrocarbon, sulfide, methylene blue active substances, biochemical oxygen demand, monovalent cations by ion chromatography, prepares deposits for metals, phosphorous etc. analyses and performs additional wet chemistry analyses via prescribed methods. Interaction with customers includes answering questions, checking paperwork submitted with samples and may include sampling trips to customers' sites. Expired sample disposal, glassware washing, bottle preparation, reagent preparation, instrument maintenance and related tasks are part of the job. Minimal weekend work to complete coliform incubation may be required. Administrative duties include proofreading reports and sample login. The incumbent is expected to become an OEPA certified analyst for general chemistry and coliform bacteria within one year and work through the tests for Lab Analyst. Position is 40 h/week and salary is paid monthly.

Requirements: B.A. or B.S. in chemistry or related field, valid driver's license, ability to lift 50 pounds, working knowledge of Excel and Word. Must pass background and drug tests.

Benefits: 2 weeks paid vacation and 10 paid holidays/year.

Salary level dependent upon experience.

Job location: Auburn Township, Ohio 44023 (Geauga County)

Biosolutions LLC provides expertise and consultative services for customers who recognize their stewardship roles for drinking water, process water and wastewater. Services include chemical and microbiological analyses on water samples and some deposit samples for clients to meet potability and NPDES discharge.
